The global maritime industry faces many challenges as it seeks to recover from the financial crisis which has affected all sectors of the industry, whilst at the same time, responding to the continuing demands of operators, regulators and society for greater efficiency, safety and the protection of the environment. This response will require innovative thinking from all sectors of the maritime industry, and particularly those involved in ship design and construction.

The third International Conference on Ship & Offshore Technology - India 2013 will take “Technological Innovation in Shipbuilding” as its theme, and will bring together members of the international maritime industry to present and discuss the latest developments in the ship design and construction process which will provide the improvements in productivity and cost-competitiveness necessary to respond to the demand for lower cost of ownership and greater environmental sensitivity. Papers are invited on the following topics:

- Design and construction of all ship types
- Fabrication & welding technology
- Corrosion and coating technology
- Project management
- Material developments; alloys, composites, etc.
- Quality assurance
- Regulation
- System integration
