

WARSHIP 2020: Future Technologies In Naval Submarines 17-18 June 2020, Bristol, UK

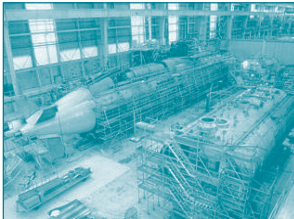

Call for papers

Supported by:

RINA invites papers on the impact of evolving / future technologies and process improvements on the design, build and support of Naval Submarines including but not limited to:

- Understanding the implications of new technologies on submarine operations
- Application of Intelligent Systems
- Innovative power systems and energy storage
- Sustainable Technologies
- Digitalisation in Submarines
- Human-Autonomy Teaming and Human Factors Considerations in Design
- Novel materials; their underwater application
- Driving down through life cost
- Availability improvement
- Streamlining build processes; reduced time and reduced cost
- Applications of Additive Manufacturing
- The role of class in submarine acceptance
- Novel approaches to platform life extension
- Design for Submarine Disposal

Submit your Abstract by 21st of February
